About

This mapping application provides users with several densely data layers, such as soils, the latest land use land cover, the USGS 5-foot contours, and the National Wetlands Inventory. The 'Map Layers' portion of the 'Legend' tab contains layers that can be turned on or off. They can only be checked on when zoomed into the map. The legend for those layers will appear below the 'Map Layers' list. Clicking in the map when the data is turned on will provide more.
